

Product Highlights

- Provides “one-tap” access to your patient’s clinical information – anytime, anywhere
- Delivers a complete view of a patient’s clinical record aggregated from multiple clinical systems
- Improves patient care by ensuring that providers have the most up-to-date information about their patients regardless of where they are
- Streamlines rounding by eliminating “chart chase” and the need to log into terminals to access patient information

Access Patient Clinical Data Anywhere From PDAs and Smartphones

Rapid Access At The Point of Care and Anywhere

For clinicians, the challenges only seem to grow. You need to see more patients, track more tests and clinical data, and stay abreast of more information than ever before – all while ensuring patient safety and high-quality care. How can you stay on top of a growing array of data, sidestep the gauntlet of disparate information systems, and avoid getting bogged down in administrative tasks?

PatientKeeper® Mobile Clinical Results™ is the answer.

Comprehensive Clinical Information

PatientKeeper Clinical Results gives you anytime, anywhere access to a comprehensive set of clinical data including:

- **Patient List**—See an accurate, up-to-date list of your patients *and their current locations* to streamline rounds.
- **Patient Summary** – Quickly scan new information for a selected patient or for all your active patients.
- **Lab Results** – Access and trend lab results and quickly see out of range values and review annotations.
- **Test Results** – Quickly read microbiology, radiology, pathology, and other text-based results – all in one place.

About PatientKeeper

PatientKeeper develops software to support a physician throughout the entire day. At any time, anywhere, physicians can access their patients' electronic records, write prescriptions, enter charges, dictate notes, document encounters, place orders, and send secure messages to other caregivers – all in a single integrated environment.

PatientKeeper, Inc.

www.patientkeeper.com

- **Medication List** – Review the patient's current medications (including IV meds and split/linked orders) and see a history of discontinued meds. If your health system has electronic medical administration (eMAR), you can see the complete dispensing history (including skipped doses) as well.
- **Clinical Notes** – View all clinical notes including admit, progress, consult, discharge, and operative notes.
- **Problem List** – Track the patient's clinical problems and share them with other providers treating the patient.
- **Vital Signs and I/Os** – Quickly review the patient's current condition with an at-a-glance presentation of temperature, blood pressure, heart rate, input/output measurements, and other vital signs.
- **Allergies** – View patient's known allergies, including substance, type (drug, food, or environment), and a description of any reaction.
- **Order Status** – Quickly see the status of all outstanding orders on the patient.
- **Alerts** – Configure the system to automatically highlight critical or abnormal results.

Access Anytime, Anywhere

Mobile Clinical Results brings all the patient's clinical data together for you — all with the convenience of your PDA or Smartphone. It eliminates the need to sign into multiple computers in multiple locations throughout the day and lets you focus on what matters most: the clinical encounter with your patient. It also supports you while you are out of the facility – access information in the car, at a soccer game, or anywhere. Receive a call from a floor nurse about a patient? Pull up that patient's record and immediately see up-to-date information on the patient's condition. No need to have the nurse read the clinical results to you.

Personalize to Your Work Style

You can personalize the appearance and workflow of *Mobile Clinical Results* screens and modules to reflect your requirements, specialty, and work style. You can display and trend lab results in a variety of popular formats – including lists, graphs, tables, or fishbone diagrams for common lab panels. You can even assemble customized lab panels such as a Cardiac Risk Profile comprised of tests across multiple lab panels.

Mobile Clinical Results makes it easy to review new information – all in one place in patient summary or in bold in each module.

An Ideal Extension for Healthcare IT

PatientKeeper Mobile Clinical Results streamlines the rounding process and allows physicians to review up-to-the-minute clinical results anywhere – without replacing your IT infrastructure. And, with other PatientKeeper applications, you can extend your solution to encompass electronic prescriptions, documentation and dictation, clinical surveillance, inter-provider communication, charge capture, and more.
