

The Comprehensive, Multi-Pane View of Patient Clinical Data– From Any Web Browser

Eliminate “Chart-Chase”

For clinicians, the challenges only seem to grow. You need to visit with more patients, track more tests and clinical data, and stay abreast of more information than ever before – all while ensuring patient safety and high-quality care. How can you stay on top of a growing array of data, eliminate the time-consuming “chart-chase,” sidestep the gauntlet of disparate information systems, and avoid getting bogged down in administrative tasks?

PatientKeeper® Physician Portal™ is the answer.

Product Highlights

- Supports informed decision-making with a complete, holistic picture of a patient’s clinical data
- Improves patient care and safety by reducing medical errors
- Saves time and increases physician satisfaction
- Provides caregivers and office staff remote access to real-time patient information
- Addresses individual preferences and work styles with personalized views
- Eliminates the need to install software through a true zero-footprint architecture

Comprehensive Clinical Information

PatientKeeper Physician Portal is the simple solution that gives you complete access to a comprehensive set of clinical data – from any tablet, notebook, laptop, or traditional desktop computer running a Web browser.

Physician Portal brings it all together for you, enabling you to quickly see lab and test results, medication histories, allergies, vital signs, inputs/outputs, and other important clinical information – all at the point of care. That eliminates wasted time navigating multiple computer systems and lets you focus on what matters most: the clinical encounter with your patient.

Physician Portal gives you and your office staff remote access to real-time patient information. *PatientKeeper Physician Portal* presents a powerful and intuitive multi-pane view of a rich, up-to-the minute, clinical narrative of patient data.

About PatientKeeper

PatientKeeper develops software to support a physician throughout the entire day. At any time, anywhere, physicians can access their patients' electronic records, write prescriptions, enter charges, dictate notes, document encounters, place orders, and send secure messages to other caregivers – all in a single integrated environment.

PatientKeeper, Inc.

- **Patient List** – See an accurate, up-to-date list of patients *and their locations* to streamline rounds – and make edits as necessary.
- **Lab Results** – Access current lab data and see if reported values are within standard/ acceptable thresholds and ranges, and view / create annotations for specific results.
- **Test Results** – Get the outcomes of previously ordered tests and procedures – such as microbiology, radiology, and pathology reports – all in one place.
- **Medication List** – Review a list of the patient's current medications as well as the complete medication history – including a complete medication administration record.
- **Clinical Notes** – View clinical documentation such as admit, consult, discharge, and operative notes.
- **Problem List** – Track the patient's clinical problems and facilitate billing, medical-necessity checking, and long-term planning.
- **Vital Signs and I/Os** – Take advantage of an at-a-glance presentation of temperature, blood pressure, heart rate, input/output measurements, and other vital signs.
- **Allergies** – See a report of the patient's known allergies, including substance, type (drug, food, or environment), and a description of the reaction.
- **Order Status** – Check on the status of your orders from pharmacy, radiology, laboratory, nursing, and dietary systems.
- **Alerts** – See new information or situations that require immediate attention.
- **Internet Access, In the Context of Your Patient** – Connect to medical-information portals, reference sites, and more.
- **PACS Images** – Link radiology reports back to the images in your PACS system to give physicians one-click access to all their relevant images.

Conforms to Each Clinician's Work Style

You can customize the appearance and usage of all *Physician Portal* screens to reflect your needs, specialties, preferences, and work styles. You can display lab results in a variety of popular formats – including lists, graphs, tables, or shorthand diagrams for CBC or Chem-7 results. You can develop customized lab panels such as a Cardiac Risk Profile comprised of your preferred selection of lab tests.

You can review graphs and tests over extended time periods to identify possible trends or complications. *Physician Portal* presents new information in bold and can generate alerts if special attention may be warranted, such as the return of lab results with variations.

Just as important, you can use *Physician Portal* with the full complement of PatientKeeper's mobile solutions, which share the same data as well as intuitive design, navigation, and personalization options – such as patient lists, view modes, filters, and more. You can read, update, and share PatientKeeper data from virtually any computing device.

An Ideal Extension for Healthcare IT

PatientKeeper Physician Portal allows healthcare institutions to offer a single point of access to clinical results without disrupting their existing IT infrastructure. And, with other PatientKeeper applications, you can extend your solution to encompass clinical results, electronic prescriptions, documentation and dictation, clinical surveillance, inter-provider communication, charge capture, and more.
